09/21/2026

$\frac{W}{d_p}$ ratio >10 reduces inertial lift

$\frac{W}{d_p}$ ratio <2 can lead to clogging

Optimal: $3 \leq \frac{W}{d_p} \leq 10$

$\frac{d_p}{D_h} \geq 0.07$

$D_h = 1.2$ mm

~~$\lambda_{100} = 0.083$~~

~~$\lambda_{200} = 0.167$~~

$\lambda_{150} = 0.125$

$\lambda_{300} = 0.25$

$\lambda_{350} = 0.292$

$\lambda_{500} = 0.417$

↳ 500 mm sphere → 500 μm = .5 mm diameter

$1.2\text{ mm} = D_h$

$\lambda = \frac{d}{D_h} = \frac{0.5}{1.2} = 0.41\overline{66}$
